# TRAINING MATERIAL V1

## PLCS PLM Web Services training

### Executive Summary

This is work in progress and more training packages will be defined over the course of the project.

### EXPLOITATION

The Training described in this deliverable has been run on two occasions.

The feedback from the training events can be summarised as "4" on a scale 1 to 5 from poor to excellent. This is relevant for the content, the presentation and overall impression.

Comments from the participants:

- More focus on how to realise specific services – now the training was more general
- Lots of time for discussions
- It would be good to have the training after a more detailed PLCS presentation – in the future the trainings could be related in time
- The examples were focused on the VEC-hub – could be more PLCS oriented
- As the participants had very different backgrounds some wanted more hands on exercises on coding and others wanted more focus on business benefits

### CONTENTS

This document describes the content of the presentations at the training.

### CONCLUSION

The structure and content of the Web Services Training is well in line with the needs and requirements from the partners within the VIVACE project. Also external participants have the same view as web services for PLCS/PLM is a very generic topic, with high importance for all industries.

A very positive addition in future trainings would be extra PLCS background presentations (included in the training or in advance) and developed hands on examples including a set of relevant tools, easy to install on the participants laptops.
