

DEFINITION OF A VIRTUAL TEST BUSINESS SCENARIO FOR LCC SIMULATION IN LINE WITH ACARE

Executive Summary

This document presents the work done by WP2.2 members in preparing a virtual test business scenario for LCC simulations in line with ACARE.

We find that the standardized LCC model will contribute to the HLO (High Level Objectives) of VIVACE in reducing lead time and thereby also cost, and it will also contribute to data traceability by the standardized format of the LCC data.

In this report we present four examples of business case scenarios where LCC modelling is used in different ways, and from these four we choose one scenario for the LCC model validation.
