**TASK 2.3.2: “TEST SIMULATION, PLANNING &  
MEASUREMENT”  
EARLY TEST INTERPRETATION METHODS**

**Executive Summary**

This document presents methods to assess the quality of test data during the test session itself, in order to be sure the measurements are providing the desired information with the required quality. A process leading from the initial CAD part to the test session is discussed, on which the methods suggested are framed, with an eye on software capabilities for the accomplishment of these tasks.
