VALIDATION REPORT ON VEC-HUB CAPABILITIES APPLICABILITY IN A 7-DAY PROPOSAL PROCESS

Executive Summary

This validation report describes a suggested realisation of the “7 Day Proposal” service requirements by using the capabilities offered by the Virtual Enterprise Collaboration Hub. The reports presents a validation scenario which is a scaled-down version of the 7 day proposal scenarios “Preparatory phase” and “Proposal generating process”. The validation scenario is implemented on a VEC-Hub instance to validate that the generic capabilities in the VEC-Hub concept supports the 7 Day Proposal service requirements. The outcome of the validation proves that the VEC-Hub concept capabilities are supporting the key IS/IT needs of the 7 Day Proposal use case in a more or less complete way. Recommendations on future work are to find virtual meeting services conforming to the VECHub concept since that is an area where there is a strong need, not only in the proposal phase of a project, but during the full life cycle of a project.
